## Education

**Texas A&M University** **College Station, TX**
*B.S. Industrial and Systems Engineering, College of Engineering* *May 2028*
Engineering Honors; Minor in Statistics; GPA: 3.44/4.00
Integrated M.S. Finance (in progress), Mays Business School

## Experience

**Software Engineering Intern** **June 2026 – Aug. 2026**
*Matic (Part-time)* *Plano, TX*

- Worked cross-functionally with physicians and engineers in Agile sprints, turning physician feedback into user stories, acceptance criteria, and prioritized releases; drafts reached **90%** first-pass physician approval.
- Owned PulseMatic end to end: an AI inbox used and tested by physicians that automates **50–100** daily clinical tasks (refills, labs, chart updates), saving about **90** min/day; built as an add-on to Matic's flagship product, Provider AI.
- Chose RAG retrieval over full-chart prompts as a speed/cost trade-off, cutting latency **64%** and token costs **82%**.
- Prioritized safety over full automation: unsupported or sensitive drafts route to physician review before charting.
- Integrated PulseMatic into Provider AI via shared EHR and UI components, moving it into active physician testing.

**Co-Founder** **Dec. 2025 – May 2026**
*ClinicalHours* *College Station, TX*

- Co-founded ClinicalHours, a volunteer SaaS for free clinics: **700+** students, top **10%** of YC applicants, Meloy Accelerator.
- Owned the product roadmap from clinic-admin and student interviews: one role-based intake, review, and onboarding workflow replacing manual staff coordination, and **$750–$1,250** annual pricing.
- Secured and launched the first pilot with BCS Free Health Clinic: **150+** applications, volume up **325%**, recruiting time down **50%** vs. its manual process; sourced **50+** more clinic leads with AI outreach tooling.
- Analyzed signup, referral, and retention data in our Supabase database with SQL; shifted marketing to pre-health orgs and peer referrals, adding **300** users in **2** weeks after **400** in the first **2.5** months.
- Shipped the full product with agentic coding tools (Claude Code, Codex) on a Supabase backend, designing reusable React components for student and admin portals: applications, review, scheduling, and hours.

**Business Insights Intern** **June 2026 – Aug. 2026**
*Legends Global (Part-time)* *Frisco, TX*

- Led a competitive whitespace analysis for AT&T Stadium and the Dallas Cowboys, benchmarking **1,400+** SKUs against peer NFL venue sales data and DFW fan demographics; recommended new F&B concepts and assortment changes.
- Modeled price elasticity for **1,400+** SKUs in Databricks SQL, projecting a **$3.6M** annual uplift over current pricing; designed a fan-friendly pricing pilot using sales heatmaps, forecasting **12%** higher per-capita spend.
- Built a menu optimization platform for **400+** venues, using a graph-based agentic workflow to route SKUs across **10** behavioral merchandising strategies that set item placement, sizing, and menu-board layout.
- Standardized KPI/OKR targets and performance reporting for **400+** venues in one tracking dashboard; presented pricing and assortment recommendations to venue and F&B stakeholders.

## Projects

**Velo** | *Aggies Invent – 3rd Place, Most Feasible Solution* **Sep. 2026**

- Prototyped an AI tool that flags policy changes across **495** Pantex documents and proposes source-cited edits.
- Prioritized proposed policy changes by operational impact and delay risk across **43** federal orders.
- Cut modeled review time **78%** vs. manual review and token use **98%** vs. full-document prompts; team won **$1,500**.

**Clara** | *AI Voice Intake for Clinical Workflows* **Hackathon**

- Designed Clara, an AI voice intake that turns clinical pre-visit conversations into structured patient data.
- Built a working prototype from spoken intake to a structured summary clinicians review before the visit.

## Awards

Problems Worth Solving Challenge (Honorable Mention) | Aggies Invent (**3rd** Overall, Most Feasible) | Good Bull Pitch (**3rd**) | Meloy Bullet Pitch (**3rd**/**60**) | Product@TAMU (**2nd** Ideathon; **3rd** JPMorgan Redesign) | Texas A&M Ideas Challenge (Finalist)

## Skills

**Product:** Product Strategy, Roadmapping, User Stories, A/B Testing, Agile (Jira), Customer Discovery, Pricing, GTM
**Technical:** SQL, Python, Excel, PowerPoint, Databricks, RAG, EHR Integration, HIPAA/PHI, Claude Code, Codex
