EDUCATION

Texas A&M University

Aug. 2025 – May 2029

B.S. Industrial Systems Engineering (Honors), Minor in Statistics | GPA: 3.7

College Station, TX

- **Organizations:** EDGE, FREE, Aggie Venture Fund, Aggies Create, Product@TAMU, Aggie Innovators

EXPERIENCE

ClinicalHours | *Co-Founder*

Dec. 2025 – Present

Meloy Kickstart Accelerator

College Station, TX

- Founded a **B2B volunteer infrastructure platform** connecting clinics with pre-med students; providing infrastructure to manage volunteer lifecycles across applications, scheduling, interviews, and communications.
- Built internal AI automation stack: **Claude-powered marketing agent**, **Gmail API outreach pipeline** with clinic-specific templates, and automated clinic scraper across **50+ DFW and BCS targets**.
- Leading product strategy and GTM across a **\$30M SAM** at **\$750–\$1,250/yr** per client; secured initial **B2B clinic partnership**, scaled to **200+** student users, and accepted into **Meloy Kickstart Accelerator**.

ML/Economics Research | *Undergraduate Researcher*

Jan. 2026 – Present

Texas A&M University

College Station, TX

- Developing a cattle futures forecasting dashboard with **65** inputs across **6** cost categories; selected **SARIMA** ($R^2 = 0.97$) as production model via **walk-forward validation** over **LSTM** and **XGBoost**.
- Coauthoring a working paper on CME cattle futures forecasting with ensemble ML approaches applied to feedlot economics decision-making; presented preliminary findings at **TAMU Student Research Week**.

System Dynamics Research | *Undergraduate Researcher*

Jan. 2026 – Present

Texas A&M University

College Station, TX

- Developing two **Vensim system dynamics** model simulating the results of stress scenarios across **WEF nexus** for dairy farming for material and economic impact using **differential equations** and **reinforcing feedback loops**.
- Co-authoring two papers (regular and robotic dairy farms) and building industry tool with logic from models.

PROJECTS

Clara | *Product@TAMU Ideathon*

Apr. 2026

- Built Clara: AI pre-visit intake system reducing clinical intake time by ~4.5 min/visit through voice-based patient calls (**Twilio API**) and structured data extraction (**GPT-4o mini LLM** + **Epic FHIR sync**).
- Architected conversational AI pipeline (**voice capture** → **GPT-4o mini** medical entity extraction → **FHIR-formatted SOAP notes**) handling speech-to-text accuracy and clinical flag detection using safety nets.

Celvio | *MedXplore Competition*

Feb. 2026

- Led **business plan** and **financial model** creation for a wearable NMES device; conducted market analysis of the **\$382M** NMES segment with competitive positioning and cost breakdown hitting a **\$45 COGS** target.
- Collaborated on hardware design across **PCB layout** using **Altium**, **pulse generator circuitry**, and power management to meet medical-grade safety and compliance standards, such as the **FDA 510K**.

FinSeek | *TAMUHack (Capital One Challenge)*

Jan. 2026

- Built a fintech fraud detection platform at TAMUHack's Capital One challenge; engineered 3-model ensemble ML (Logistic Regression, Isolation Forest, LightGBM) achieving **95%+** precision via **2-of-3** voting consensus.
- Trained on **200k+** PaySim transactions; tuned model thresholds to reduce false positives by **99%**.

AWARDS

Meloy Bullet Pitch (3rd Place, April 2026) | **Good Bull Pitch** (3rd Place, March 2026) | **Texas A&M Ideas Challenge** (Finalist, March 2026) | **Product@TAMU Ideathon – Persona** (2nd Place, Nov. 2025)

SKILLS

Languages: Python, SQL, C++, JavaScript/TypeScript

ML: XGBoost, LightGBM, LSTM, SARIMA, SHAP, Scikit-learn

Data & Modeling: Pandas, NumPy, Tableau, Excel/VBA, Vensim

Web & Tools: Next.js, Supabase, React, Git, Figma, Docker
