Education

Texas A&M University **College Station, TX**
B.S. Industrial and Systems Engineering, College of Engineering *May 2028*
Engineering Honors; Minor in Statistics; GPA: 3.44/4.00
Integrated M.S. Finance (in progress), Mays Business School

Experience

Co-Founder **Dec. 2025 – May 2026**
ClinicalHours *College Station, TX*

- Co-founded ClinicalHours, software that runs volunteer recruiting, scheduling, and hours tracking for free clinics; reached **700+** student users, ranked in the top **10%** of **Y Combinator** applicants, and joined the Meloy Accelerator.
- Owned the roadmap from customer discovery with clinic admins and students: set **$750–$1,250** annual per-clinic pricing and designed one role-based intake, review, and onboarding workflow replacing manual coordination.
- Secured and launched the first pilot with BCS Free Health Clinic, which now runs its full volunteer program on the platform: **150+** applications, application volume up **325%**, recruiting time down **50%** vs. its manual process.
- Led go-to-market: analyzed signup, referral, and retention data with SQL; after **400** users in **2.5** months, refocused marketing on pre-health student orgs and peer referrals, adding **300** more in **2** weeks.
- Shipped the product using Claude Code and Codex on React/TypeScript and Supabase (student and admin portals), then built AI outreach tooling (Claude, Gmail MCP, web scraping) that sourced **50+** clinic leads.

Software Engineering Intern **June 2026 – Aug. 2026**
Matic (Part-time) *Plano, TX*

- Owned PulseMatic end to end, an AI inbox, used and tested by physicians, that automates **50–100** daily clinical tasks (refills, labs, chart updates), saving about **90** min/day.
- Ran discovery with physicians, turning their feedback into user stories and acceptance criteria for the engineering team's Agile sprints; AI drafts reached **90%** first-pass physician approval.
- Swapped full-chart prompts for retrieval of relevant chart sections (RAG), cutting latency **64%** and token cost **82%**.
- Shipped through CI/CD on GCP Cloud Run with automated accuracy checks; unsupported drafts go to physician review.
- Integrated PulseMatic into Matic's flagship product, Provider AI, moving it from prototype into physician testing.

Business Insights Intern **June 2026 – Aug. 2026**
Legends Global (Part-time) *Frisco, TX*

- Ran a menu whitespace analysis for **AT&T Stadium and the Dallas Cowboys**, benchmarking peer NFL venue sales data and DFW fan demographics; presented new F&B concepts and assortment changes to venue stakeholders.
- Modeled fan-friendly pricing for **1,400+** SKUs in Databricks SQL from price elasticity and sales heatmaps and A/B tested it on targeted SKUs and stands, projecting a **$3.6M** annual uplift over current pricing.
- Scaled the pricing work into a menu optimization platform for **400+** venues: an AI agent workflow applies **10** behavioral merchandising strategies to set item placement, sizing, and menu-board layout.
- Built a Claude-powered dashboard that makes KPIs and OKRs easy to track and update, designed to scale across venues.

Projects & Organizations

Velo | *Aggies Invent – 3rd Overall, Most Feasible Solution* **Sep. 2026**

- Built an AI tool that flags policy changes across **495** Pantex (DOE) documents and drafts source-cited edits.
- Sent only changed sections to the LLM using document diffs, cutting modeled token use **98%** vs. full-document prompts.
- Prioritized proposed edits by operational impact and delay risk across **43** federal orders; modeled review time fell **78%** vs. fully manual review, and the team won **$1,500**.

Awards

Problems Worth Solving Challenge (Honorable Mention) | Good Bull Pitch (3rd) | Meloy Bullet Pitch (3rd/60) | Product@TAMU (2nd Ideathon; 3rd JPMorgan Redesign) | Texas A&M Ideas Challenge (Finalist)

Skills

Product & Program: Product Strategy, Roadmapping, Customer Discovery, User Stories, Agile (Scrum, Jira), GTM
Technical: SQL, Python, Databricks, Excel, PowerPoint, Tableau, Power BI, Statistics, A/B Testing, RAG, CRM, HIPAA/PHI
