Education

Texas A&M University **College Station, TX**
B.S. Industrial and Systems Engineering, College of Engineering *May 2028*
Engineering Honors; Minor in Statistics; GPA: 3.44/4.00
Integrated M.S. Finance (in progress), Mays Business School

Experience

Co-Founder **Dec. 2025 – May 2026**
ClinicalHours *College Station, TX*

- Co-founded ClinicalHours, software that runs volunteer recruiting, scheduling, and hours tracking for free clinics; reached **700+** students, ranked in the top **10%** of YC applicants, and joined the Meloy Accelerator.
- Owned the roadmap from customer discovery with clinic admins and students, setting **$750–$1,250** annual pricing and a role-based intake, review, and onboarding workflow that replaced manual coordination.
- Launched the first pilot with BCS Free Health Clinic, which runs its full volunteer program on the platform: **150+** applications, volume up **325%**, recruiting time down **50%** vs. its manual process.
- Owned go-to-market: analyzed signup, referral, and retention data with SQL in Supabase and refocused marketing on pre-health student orgs and peer referrals: **400** users in **2.5** months, then **300** more in **2** weeks.
- Built the product with Claude Code and Codex agents on React/TypeScript and Supabase (Postgres): student and admin portals for applications, review, scheduling, and hours tracking.

Software Engineering Intern **June 2026 – Aug. 2026**
Matic (Part-time) *Plano, TX*

- Owned PulseMatic end to end, an AI inbox used and tested by physicians that automates **50–100** daily clinical tasks (refills, labs, chart updates), saving about **90** min/day.
- Ran discovery with physicians and engineers in Agile sprints, writing user stories and acceptance criteria from physician feedback; drafts reached **90%** first-pass physician approval.
- Retrieved only the relevant chart sections (RAG) instead of full charts, cutting latency **64%** and token cost **82%**.
- Shipped through CI/CD on GCP Cloud Run with automated accuracy checks; risky drafts go to physician review.
- Integrated PulseMatic into Matic's flagship product, Provider AI, moving it from prototype to physician testing.

Business Insights Intern **June 2026 – Aug. 2026**
Legends Global (Part-time) *Frisco, TX*

- Modeled price elasticity for **1,400+** SKUs in Databricks SQL, projecting a **$3.6M** annual uplift over current pricing.
- Designed a fan-friendly pricing pilot from sales heatmaps, forecasting **12%** higher per-capita spend.
- Scaled the pricing work into a menu optimization platform for **400+** venues: an AI agent workflow assigns SKUs across **10** behavioral merchandising strategies that set item placement, sizing, and menu-board layout.
- Ran a competitive analysis of AT&T Stadium F&B sales vs. peer NFL venues; presented new concepts to venue leaders.
- Standardized KPI/OKR targets across the venue portfolio in one dashboard; presented recommendations to F&B leaders.

Projects

Velo | *Aggies Invent – 3rd Overall, Most Feasible Solution* **Sep. 2026**

- Built an AI tool that flags policy changes across **495** Pantex (DOE) documents and drafts source-cited edits.
- Sent only changed sections to the LLM using document diffs, cutting token use **98%** vs. full-document prompts.
- Planned and prioritized proposed edits by operational impact and delay risk across **43** federal orders so document owners saw the riskiest changes first; cut modeled review time **78%** vs. manual review; team won **$1,500**.

Awards

Problems Worth Solving Challenge (Honorable Mention) | Aggies Invent (3rd Overall, Most Feasible) | Good Bull Pitch (3rd) | Meloy Bullet Pitch (3rd/60) | Product@TAMU (2nd Ideathon; 3rd JPMorgan Redesign) | Texas A&M Ideas Challenge (Finalist)

Skills

Product & Program: Product Strategy, Roadmapping, Customer Discovery, User Stories, Agile (Scrum, Jira), GTM
Technical: SQL, Python, Databricks, Excel, PowerPoint, Tableau, Power BI, Statistics, A/B Testing, RAG, CRM, HIPAA/PHI
